

Deepak Meena - Resume

DEEPAK MEENA

Software Development Engineer — Full-Stack (.NET / Angular / Azure)

Greater Noida, UP · +91 6396513103 · deepaksingh1712000@gmail.com linkedin.com/in/deepak-meena-734b9625b · github.com/DeepakMeena222187 · deepakmeena2221187.netlify.app

SUMMARY

Final-year B.Tech CSE (Amity University, 2026) with production experience shipping and deploying full-stack applications to Azure. Built and deployed a .NET 10 + Angular 21 system with managed-identity authentication and zero stored credentials, event-driven messaging via Azure Service Bus, and a Lighthouse 97/100/100/100 frontend. Comfortable across the stack from EF Core query tuning to WCAG-compliant UI. Seeking SDE roles where production ownership starts early.

TECHNICAL SKILLS

Languages C#, TypeScript, JavaScript, SQL, Python **Backend** .NET 10, ASP.NET Core Minimal APIs, Entity Framework Core, REST APIs, JWT authentication, background services **Frontend** Angular 21 (signals, standalone components), React.js, RxJS, reactive forms, WCAG 2.1 AA accessibility **Cloud & DevOps** Azure App Service, Azure SQL, Azure Service Bus, Managed Identity, GitHub Actions CI/CD, Firebase **Databases** SQL Server, MySQL, query indexing & profiling, window functions **Tools** Git/GitHub, Serilog, Power BI

EXPERIENCE

Thinkbridge Academy — Full-Stack .NET Engineering Program

Thinkschooler · 2026

Structured production-engineering program building one continuously deployed application (.NET 10 API + Angular 21 SPA + Azure SQL), delivered through agent-assisted development with independent verification of every result.

- Deployed a .NET API to **Azure App Service authenticating to Azure SQL via system-assigned managed identity with zero stored credentials** — verified at the database session level (auth_scheme: FEDERATED); scoped the identity to reader/writer only, with no DDL rights, and moved migrations to a separate admin path.
- Built **CI/CD on GitHub Actions using OIDC federation with no stored secrets**, adding a post-deploy step that asserts live URLs and response headers rather than trusting the upload's exit code — which caught a deploy that reported success while leaving the site broken.
- Cut the Angular initial bundle **93% (121.8 kB → 8.8 kB)** by identifying static imports that were pulling lazy-loaded route components into the eager bundle; achieved **Lighthouse 97 / 100 / 100 / 100** on the live deployment.
- Implemented **Azure Service Bus topic fan-out with two subscriptions and competing-consumer workers**, making handlers idempotent via a unique-index insert as the dedupe check — verified 10 concurrent messages processed exactly once, and demonstrated poison-message dead-lettering after 3 delivery attempts.
- Built a **bounded-channel background service with graceful shutdown**, distinguishing “stop accepting work” from “drain what’s queued,” and proved both the successful-drain and grace-period-exceeded paths against a live database.
- Caught a pre-deployment security defect**: an unguarded development seeder that would have created a known-password admin account in the production database on first boot; identified it, rotated the affected credential, and documented the git-history exposure.
- Rebuilt the frontend around URL-driven routing with lazy LoadComponent routes and functional route guards; tokenised **217 hardcoded colours into a semantic design system** and fixed WCAG contrast failures found by computing ratios rather than inspecting visually.

Web Development Intern — Prodigy InfoTech (Remote)

May 2025 – Jun 2025

- Shipped 3 production frontend applications from design to live deployment within a one-month window, using HTML5/CSS3/ES6+ with GitHub-Netlify CI/CD.
- Reduced UI code duplication across builds by applying component-based architecture and DRY principles to produce reusable modules; verified consistent rendering across mobile and desktop through cross-device testing.

PROJECTS

QuoteSearch — Cloud-Deployed Full-Stack Application · .NET 10 · Angular 21 · Azure *Live: quotesapiday17web.z29.web.core.windows.net* · demo login: DEMO_EMAIL / DEMO_PASSWORD Event-driven quote management system deployed end-to-end on Azure. API on App Service authenticating to Azure SQL by **managed identity with no stored credentials**; Angular SPA on Storage static website with gzip and immutable cache headers, scoring **Lighthouse 97/100/100/100**. Asynchronous audit pipeline via **Azure Service Bus topic fan-out** with competing-consumer workers and unique-index idempotency. Deployed through GitHub Actions using **OIDC federation with zero stored secrets**.

SpendSmart — Expense Tracker PWA · React.js · Firebase · Recharts · Vite · Netlify Full-stack personal finance PWA with real-time Firestore sync and installable offline access. Architected on Firebase with Google Sign-In and **UID-scoped Firestore security rules**; delivered budget-overspend alerts and interactive category-spend visualisations, deployed via automated GitHub CI/CD.

Customer Sales Analysis System · MySQL · SQL Improved query performance an estimated **35-40%** by indexing and profiling queries across a normalised 8-table schema using joins, views, subqueries, and window functions.

EDUCATION

B.Tech, Computer Science & Engineering — Amity University, Greater Noida · 2022–2026 CGPA 7.51/10.0 Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

CERTIFICATIONS

Python for Data Science — Coincent, in association with Robotics Club, IIT Guwahati (2023) Web Development — Prodigy InfoTech (2025) · Cisco Networking
